MAXM
SKATE

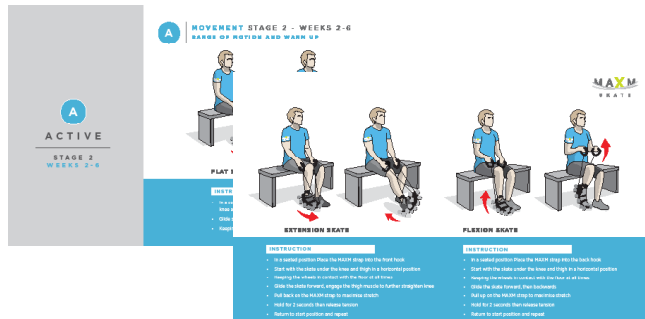

Control your recovery easily
from home with a 12 week guided
Total Knee Replacement
rehabilitation program.

REAL DATA, REAL PROGRESS

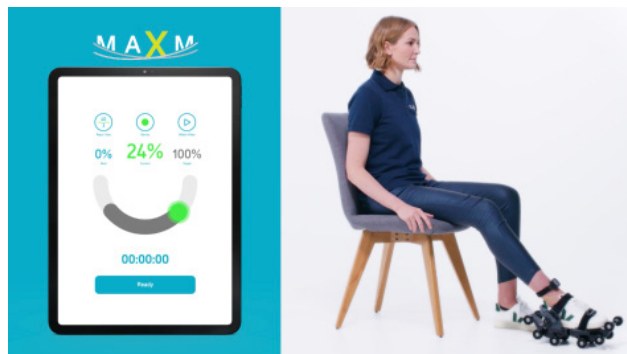

What is MAXM?

MAXM is a rehabilitation solution for patients undergoing knee replacement surgery. MAXM combines innovative technology with a rehabilitation device designed to be easily used on your own smartphone.

Before Surgery you will be sent a MAXM Getting Started Pack with a skate, wearable sensor and instructions on how to get started.

Your Surgeon will select an appropriate care plan that includes education, assessments, and daily video guided exercises to complete all from the comfort of your own home.

Our Studies show improved knee movement, reduced pain, less time in hospital and decreased anxiety for patients who use MAXM. Your surgical journey is remotely monitored with telehealth and tech support available.

Testimonial

“I’ve had both of my knees replaced now, one with maxm and one without. Using the MAXM Skate, my recovery has been accelerated. I was more motivated and the whole experience was less isolating.”
